## RADIOGRAPHIC EVALUATION OF PHENOTYPE WITH RESPECT TO HIP/ELBOW DYSPLASIA

\* The study must be repeated when the animal is 24 months of age or older to qualify for OFA numbers.

           **EXCELLENT HIP JOINT CONFORMATION\***

superior hip joint conformation as compared with other individuals of the same breed and age

           **BORDERLINE HIP JOINT CONFORMATION**

marginal hip joint conformation of indeterminate status with respect to hip dysplasia at this time – **Repeat study in six months**

✓

           **GOOD HIP JOINT CONFORMATION\***

well formed hip joint conformation as compared with other individuals of the same breed and age

           **MILD HIP DYSPLASIA**

radiographic evidence of minor dysplastic changes of the hip joints

           **FAIR HIP JOINT CONFORMATION\***

minor irregularities of the hip joint conformation as compared with other individuals of the same breed and age

           **MODERATE HIP DYSPLASIA**

well defined radiographic evidence of dysplastic changes of the hip joints

           **SEVERE HIP DYSPLASIA**

radiographic evidence of marked dysplastic changes of the hip joints

### RADIOGRAPHIC FINDINGS

**HIP JOINTS - STANDARD VD VIEW**

- subluxation
- remodeling of femoral head/neck
- osteoarthritis/degenerative joint disease
- shallow acetabula
- acetabular rim/edge change
- unilateral pathology            left            right
- transitional vertebra
- spondylosis
- panosteitis
- other

**ELBOW JOINTS – FLEXED LATERAL VIEW**

✓            negative for elbow dysplasia            ✓            L            ✓            R

**ELBOW DYSPLASIA**

Grade I L            R             
 Grade II L            R             
 Grade III L            R           

**RADIOGRAPHIC FINDINGS**

degenerative joint disease (DJD) L            R             
 ununited anconeal process (UAP) L            R             
 fragmented coronoid process (FCP) L            R             
 osteochondrosis L            R
